

## Total Commander Lister Plug-in 1.03 problems

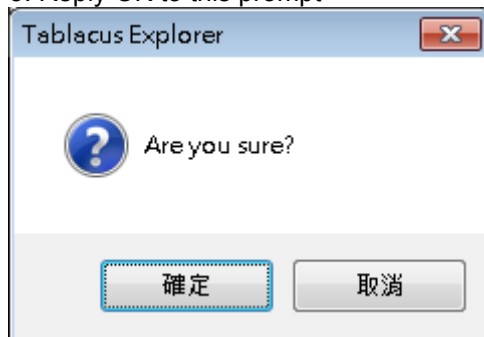

### Problem 1: Remove, Up and Down buttons do not work

1. Select a record in configuration page

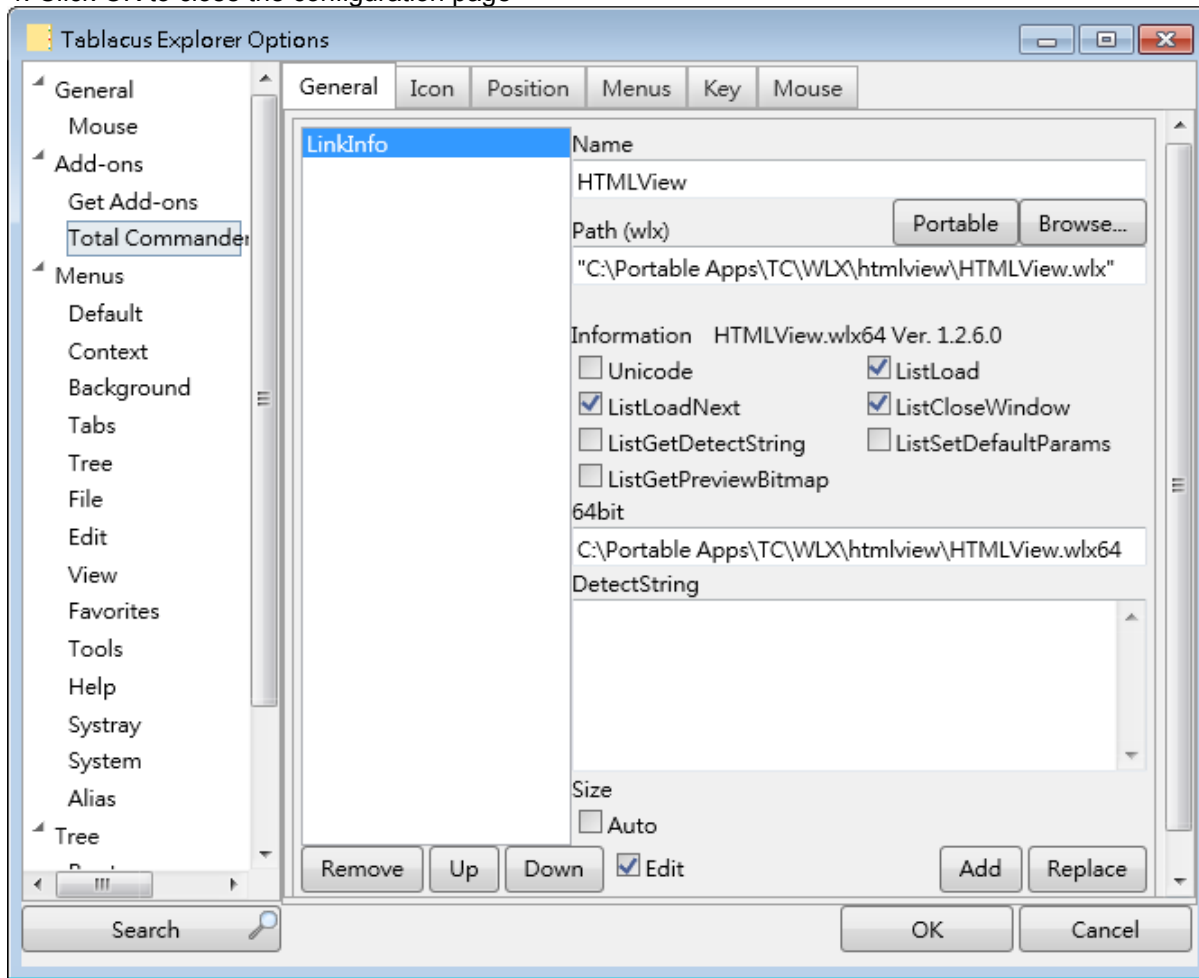

2. Click "Remove"

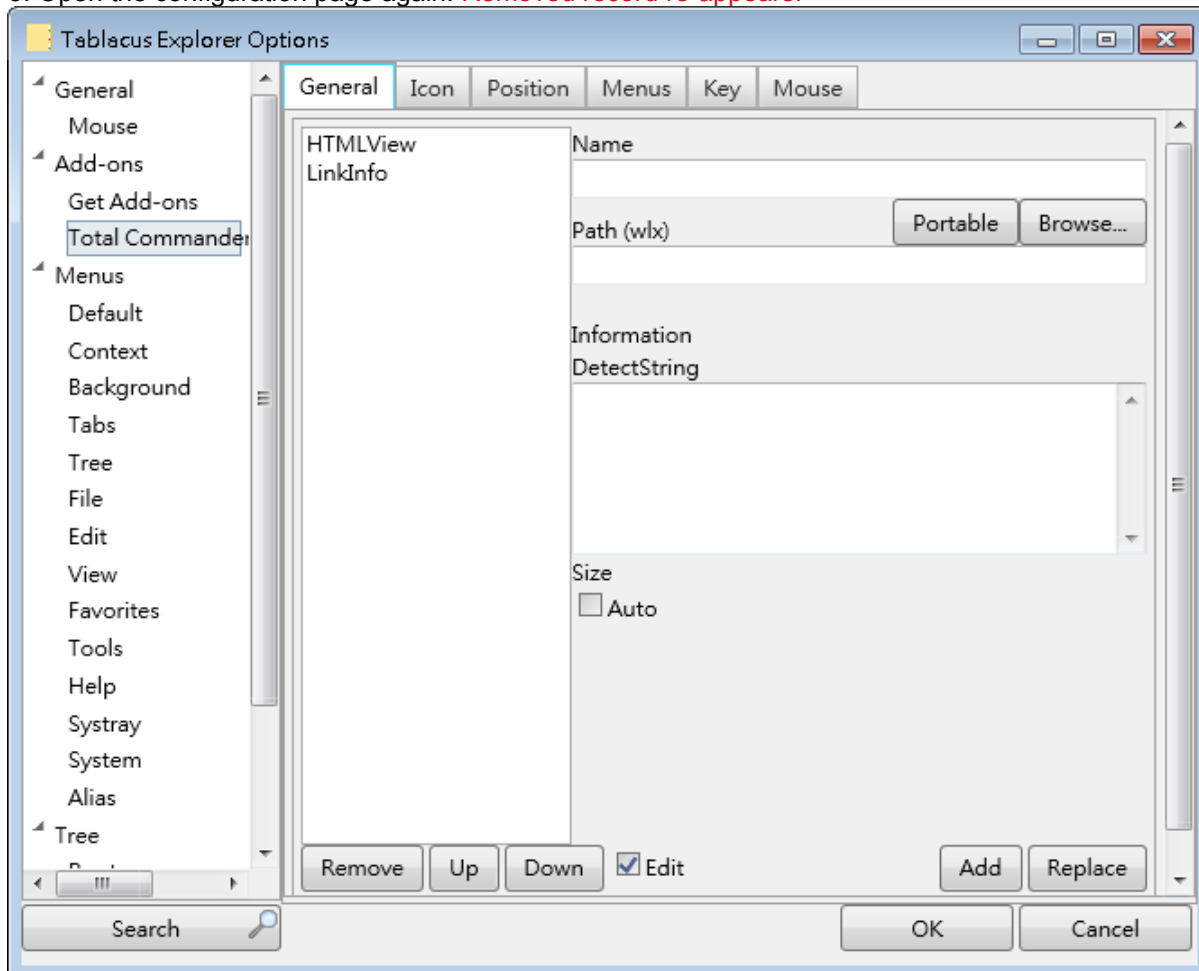

3. Reply OK to this prompt

4. Click OK to close the configuration page

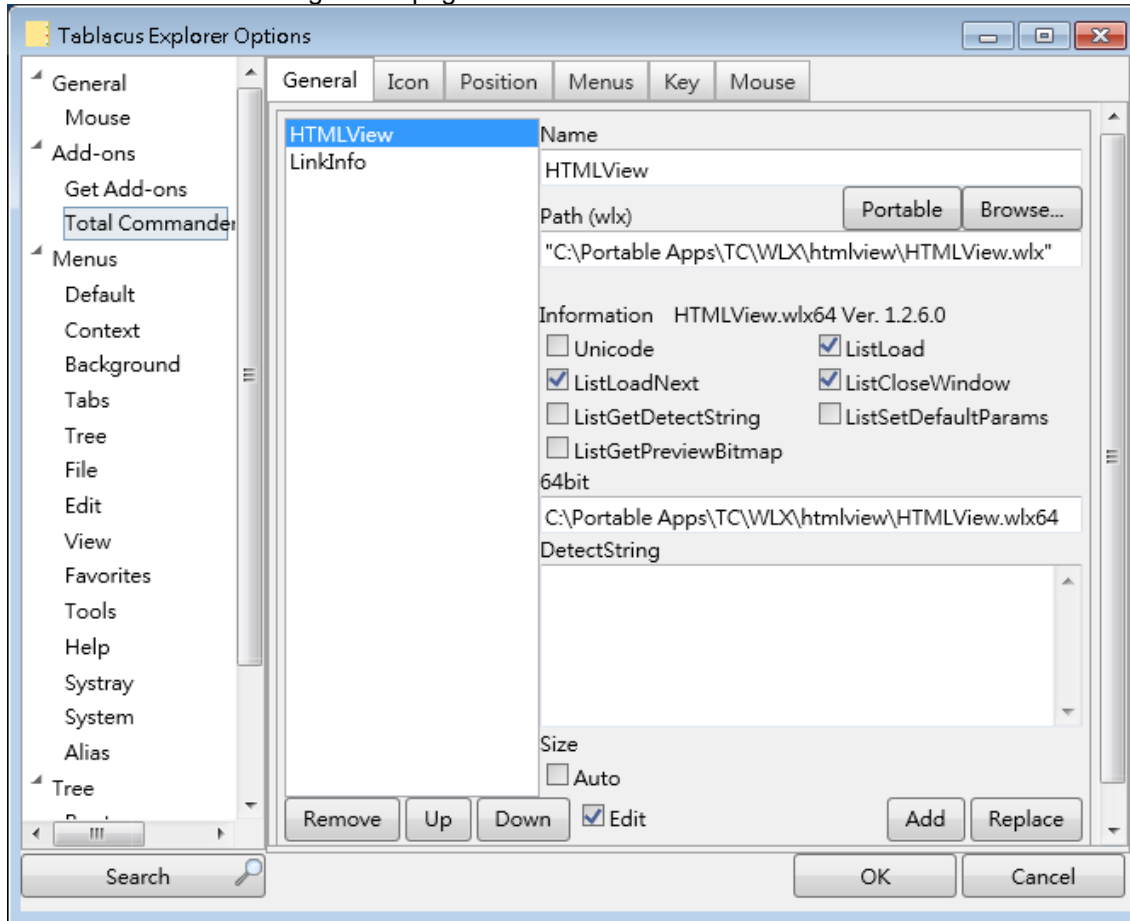

5. Open the configuration page again. **Removed record re-appears.**

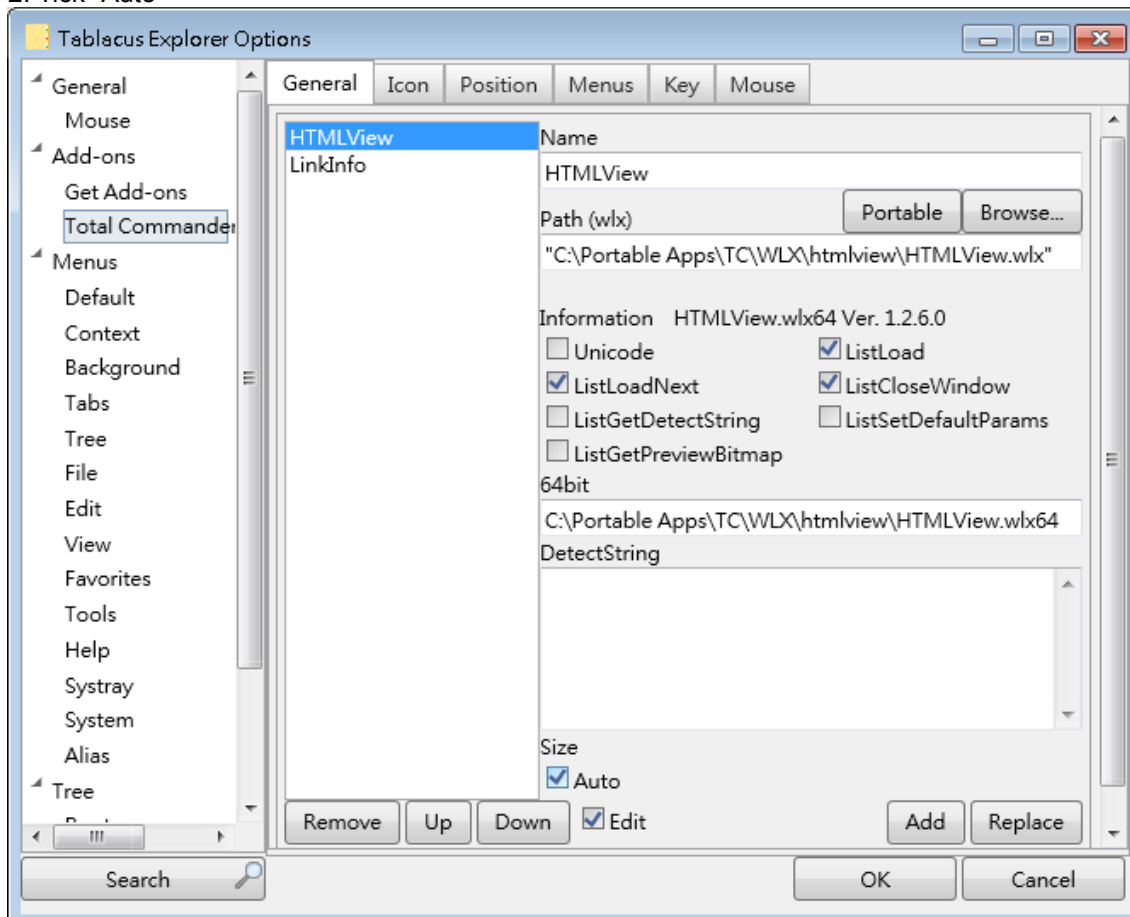

Similar problem in "Up" and "Down" buttons. Any change to record sequence are unexpectedly reverted.

## Problem 2: Missing prompt if a users forgets to click “Add” or “Replace”

1. Select a record in configuration page

2. Tick “Auto”

3. Forget to click “Replace”

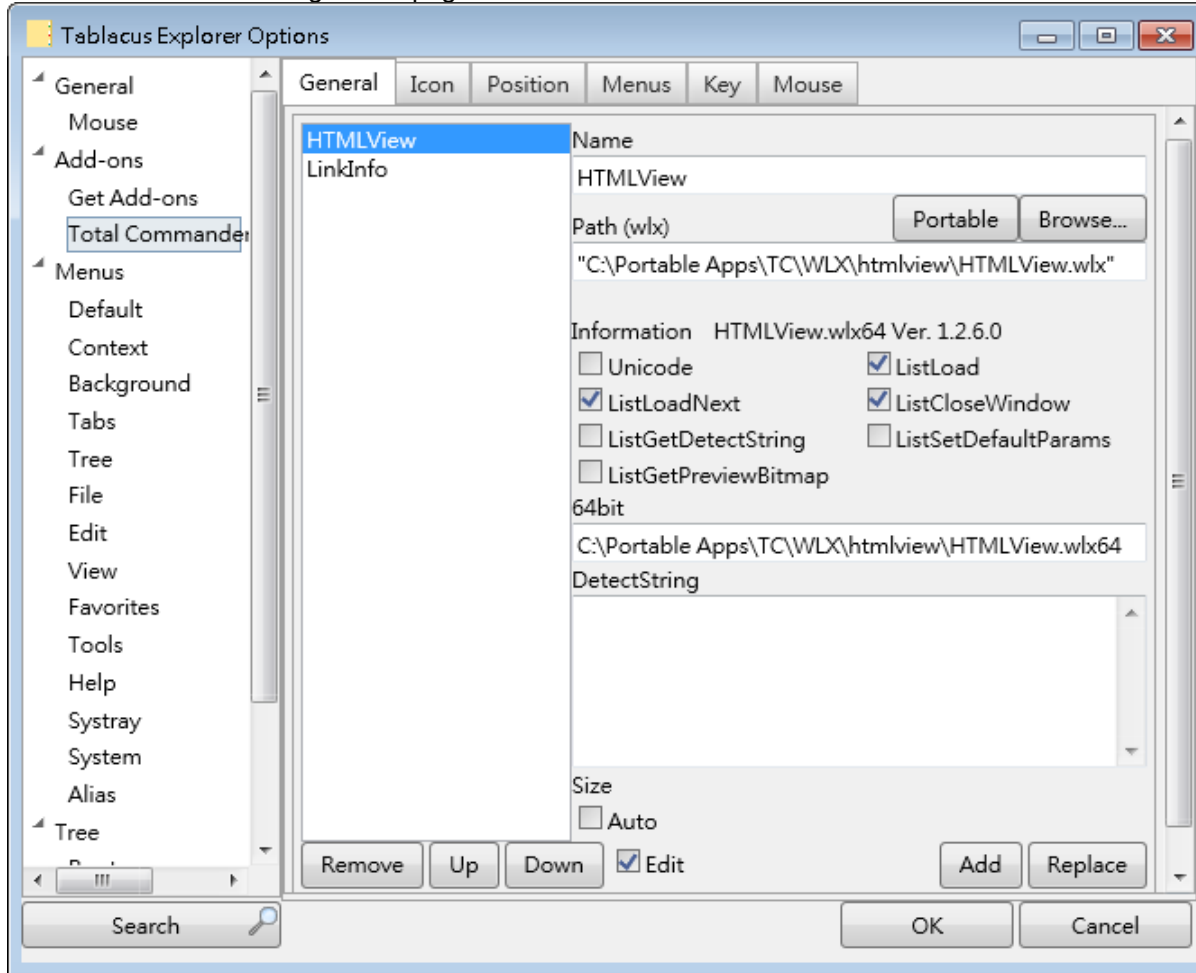

4. Click OK

The configuration page is closed and the change is lost.

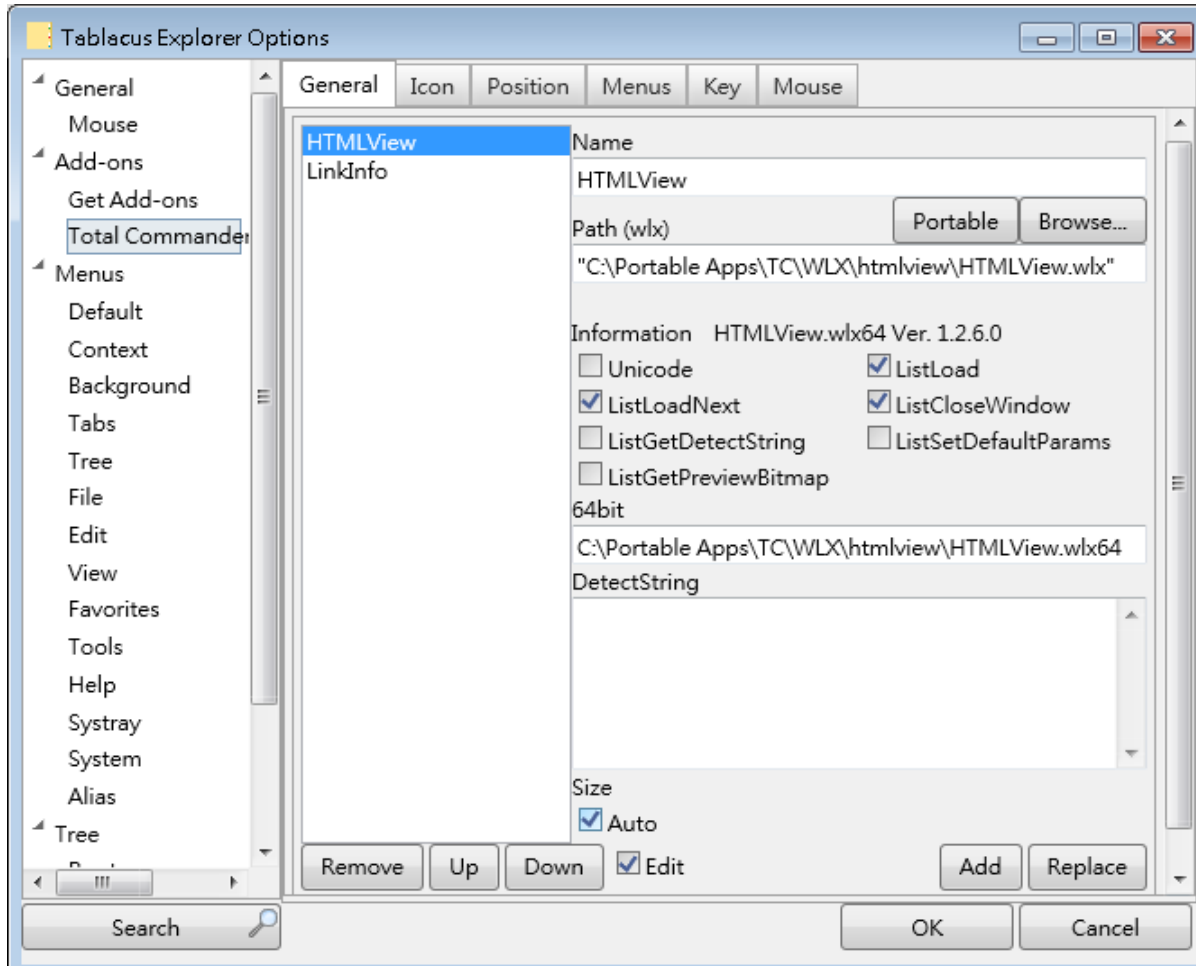

TE should ask the user whether to update the record before the page is closed.

### Problem 3: Duplicated prompt after X button is clicked

1. Select a record in configuration page

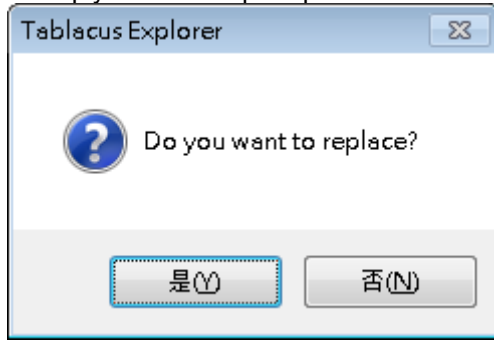

2. Tick "Auto"

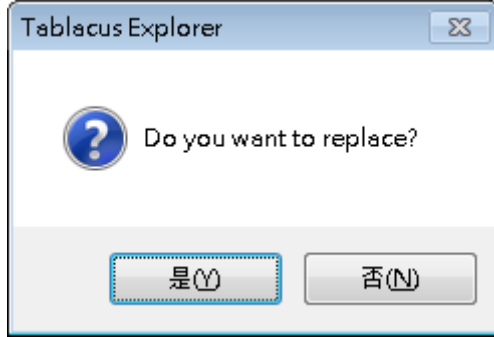

3. Click "Replace"

- 4. Click X button
- 5. Reply Yes to this prompt

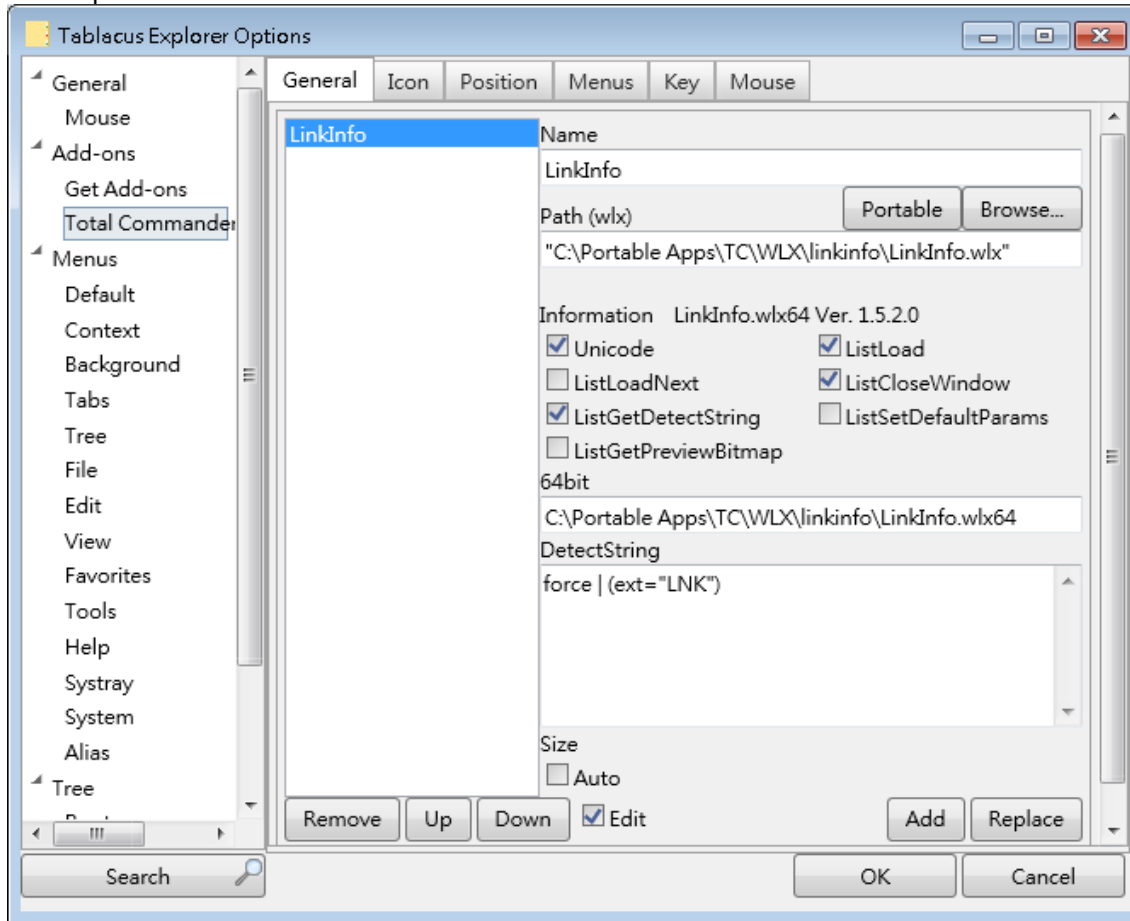

The prompt unexpectedly shows again.

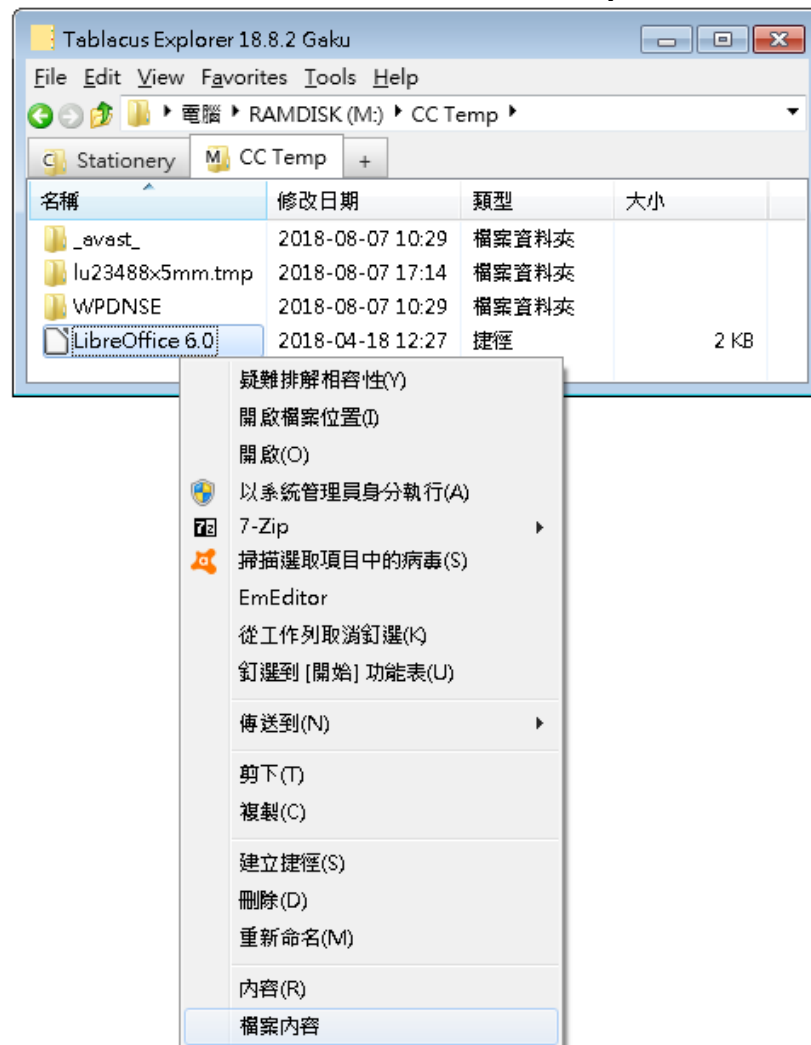

## Problem 4: Unsupported file type is incorrectly enabled for viewing

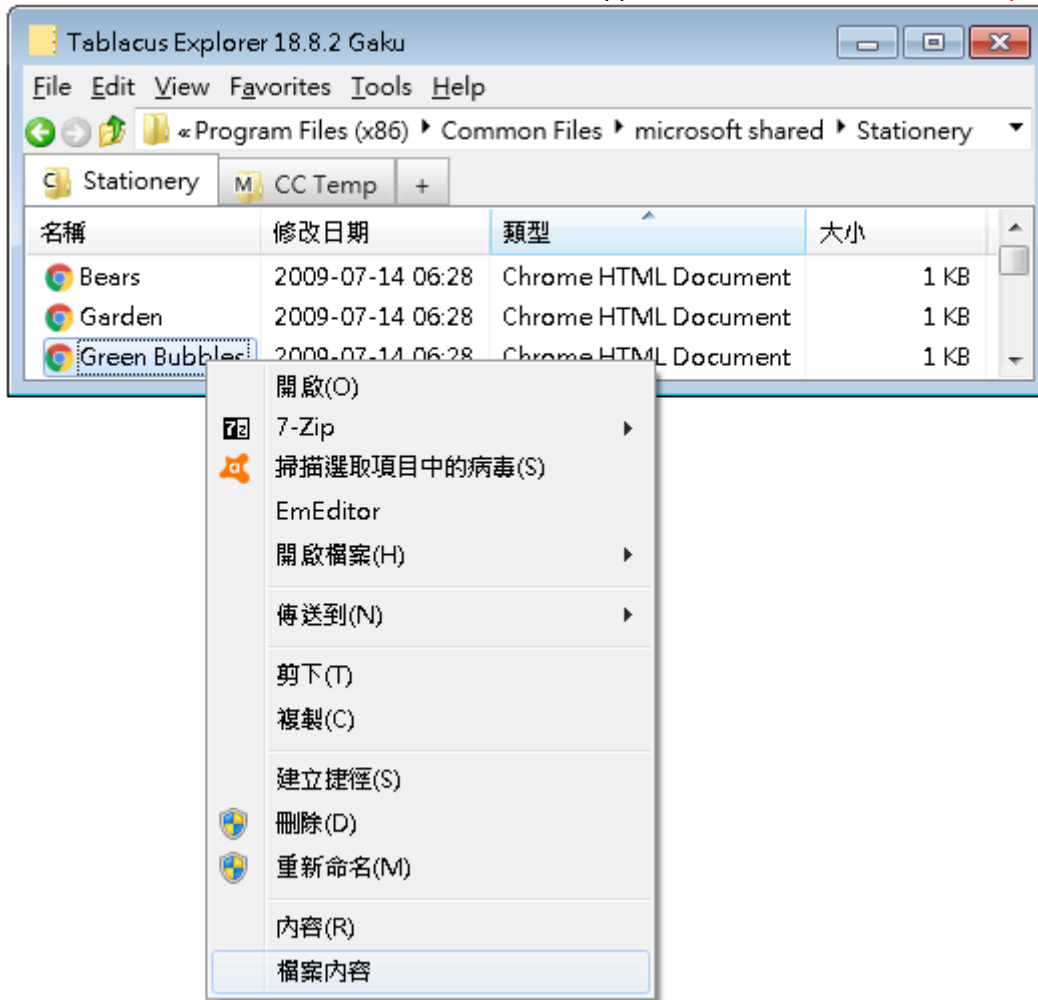

1. Setup the add-on as follows

2. Select a LNK file. The context command correctly shows.

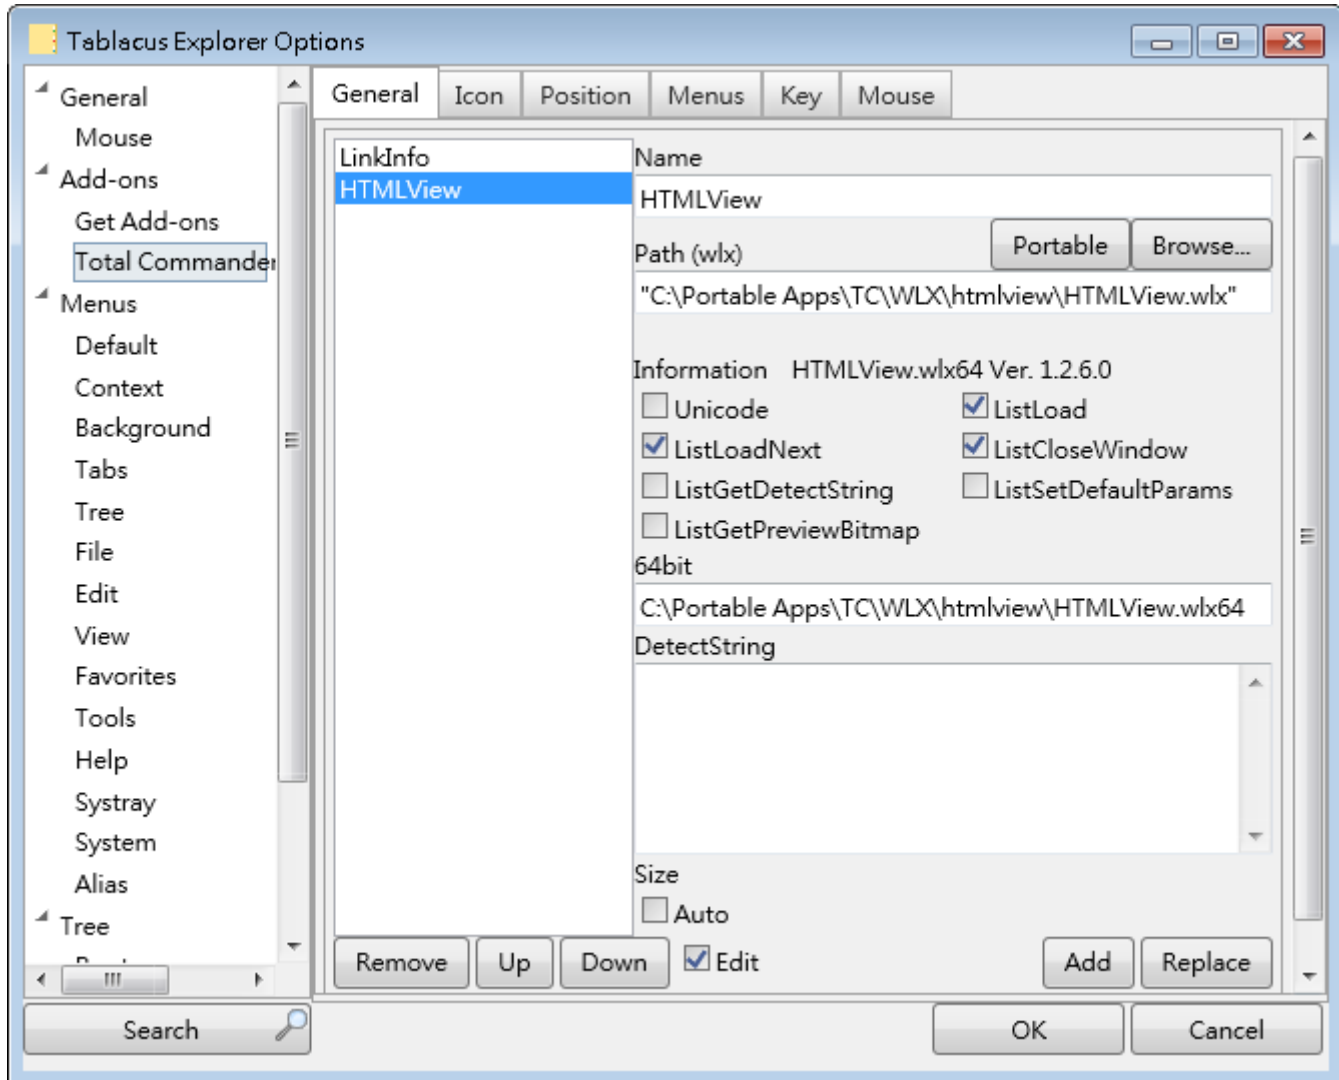

3. Select an HTML file which "LinkInfo" does not support. The context command unexpectedly shows.

This problem occurs in some plug-ins such as LinkInfo and HTMLView, but does not occur in some others such as PDFView.

## Problem 5: Incorrect viewer

1. Add HTMLView after LinkInfo

2. Select an HTML file and choose the "File Content" context command. The file is incorrectly shown as a LNK file.
